**DETAILED ACTION**

***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: Rossin (US 4,468,658) discloses a simplified control circuit for an intrusion detection device (title); an intrusion detection alarm comprising a normally closed terminal, normally open terminal, and common terminal (fig. 9, col. 15, lines 9-27). But fails to explicitly disclose a first return line and a second return line connected from the normally open terminal to the negative terminal; a zener diode, having a peak reverse voltage, and in series with an LED that are both placed in parallel with the second resistor wherein wherein a voltage drop across the second resistor comprises insufficient voltage to reach the peak reverse voltage in the standby state and wherein the active state removes the first resistor from the circuit, reduces the voltage drop across the intrusion detection alarm, and increases the voltage drop across the second resistor to result in a voltage over the peak reverse voltage across the zener diode that allows it to conduct and illuminate the LED.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
